

A cost-effective, high quality, continuous forms printing system

IBM Infoprint 3000 Advanced Function Printing System

Highlights

- **High print quality—available with 480, 600 or 480/600 operator-switchable resolutions**
- **Print speed up to 344 ipm two-up letter-size or 324 ipm two-up A4 in duplex mode**
- **Total print solution including powerful control unit and advanced print and job management**
- **Runs in simplex, duplex and dual simplex**

High Print Quality

The Infoprint 3000 offers excellent production print quality. The printer uses an advanced double-dotting technique that allows it to accept 240 or 300 dpi data streams and print them at 480 or 600 dpi resolution in both simplex and duplex printing modes. Coupled with IBM's exclusive, edge-smoothing Print Quality Enhancement (PQE) technique, the Infoprint 3000 can provide significantly improved print quality compared to 240 and 300 dpi output. In addition, operators can control the fusing temperature from the console, enabling print quality optimization. The printer also accepts and prints native 600 dpi production print data streams.

Unique Price/Performance Point

The Infoprint 3000 delivers one of the highest levels of performance available in its price range. The printer is available in simplex and duplex models, and can operate in dual simplex mode. At speeds of up to 172 impressions per minute (ipm) in simplex mode, and up to 344 ipm in duplex mode, the Infoprint 3000 outputs consistent, high-quality statements, invoices, bills and policies. This cost-effective performance, in conjunction with the printer's low supply and maintenance costs, allows the Infoprint 3000 to offer a highly competitive Total Cost of Printing (TCOP).

Total Print Solution

The Infoprint 3000 is equipped with the IBM Advanced Function Common Control Unit™ (AFCCU™). This state-of-the-art controller gives operators the flexibility to switch between 480 and 600 dpi resolution, and supports native Intelligent Printer Data Stream™ (IPDS™). It also leverages the benefits of Advanced Function Presentation™ (AFP™), IBM's architecture that provides enhanced printing capabilities.

With optional Infoprint Manager offerings, you can also take advantage of a complete print and job management system for your production printing environment. Together, the AFCCU and Infoprint Manager offer unparalleled production printing reliability, manageability and functionality.

Standard and advanced pre- and post-processing interfaces provide added input and output capabilities beyond the traditional input source and output stacker. You can select options that are appropriate for your application needs so that productivity can be maximized.
